

The original size of the bmp file was 2,497 kb, and the original size of the txt file was 89kb.

 office_hours.bmp	11/3/2022 8:22 PM	BMP File	2,497 KB
--	-------------------	----------	----------

 sample_document.txt	11/3/2022 2:12 PM	Text Document	89 KB
---	-------------------	---------------	-------

After running our compression algorithm on both files, we get a noticeable difference in size from the original and different ratios of compression depending on whether or not we enable the -b flag.

When comparing our compression algorithm with others such as ZIP, RAR, BZIP2, GZIP, we see that while our compression ratio is quite big, it is not nearly as good as theirs. But that can be due to the fact that our implementation was not perfect, the ones described before are quite industry standards, so they have to be up to par, the best of all of them being BZIP2.
